DK6 Clip System

Nº of clips needed:

The number of clips necessary for a project will depend on the distance between the joists of the supporting structure and the width of the deck board being used. To calculate the amount required simply multiply the number of deck boards, minus one, by the number of joists.

Save Time:

The clip system is up to **40% quicker** to install when compared to traditional (plug) methods.

All dimensions are in mm. Dimensions may vary.

Dimensions:

B-Fix Clip = 40 x 34 x 8.5mm
Chennel Screw = 5 x 35mm - Tx 20

B-Fix Border Clip = 40 x 58 x 8.5mm
Border Screw = 5 x 40mm - Tx 20

Finish: Bronze tinted stainless steel.

1 Box Contains: B-Fix = 100 clips; 100 self-drilling screws; instructions; and a Torx bit.
B-Fix Border = 50 clips; 50 B-Screws; instructions.

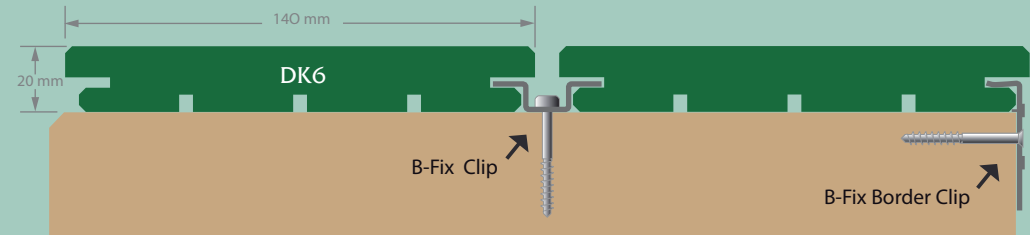

Spacing:

The system automatically creates a 4.5 to 5mm gap between each profiled decking board. The system allows the decking to absorb hygrometric changes and reduces the risk of splitting or cracking.

Installation:

Thanks to its self-drilling screw, a simple screw driver is all that is required to attach the clips to the hardwood joists. Additionally, the screw is waxed in order to ensure that it penetrates the wood effortlessly and avoids breakage due to heat. The decking can then slot together one after the other.

Lengths available in 2.1m and longer

Delivery can be organised normally within 7 to 10 days

Registration number BMT-1011
BM TRADA certification scheme covers the SH, MTC and CSA schemes

PEFC/1632-025
